

A scatter plot showing the relationship between Azaserine and Control concentrations on a log-log scale. The x-axis is labeled 'Control (log 10 (pmol/mg))' and the y-axis is labeled 'Azaserine (log 10 (pmol/mg))'. Both axes range from 10^0 to 10^4 . A blue regression line indicates a strong positive correlation between the two variables.

A scatter plot showing the average abundance of proteins across a protein index. The y-axis is labeled 'Average abundance (log₁₀ (pmol/mg))' and ranges from 10⁻¹ to 10³. The x-axis is labeled 'Protein index' and ranges from 0 to 1000. Two data series are plotted: 'Azaserine' (red dots) and 'Control' (blue dots). The Control series shows a steady increase in abundance, reaching approximately 10³ pmol/mg at the end of the index. The Azaserine series shows a similar trend but with a significant drop in abundance for the last 100 proteins, which are clustered around 10¹ to 10² pmol/mg.

	Azaserine 1	Azaserine 2	Azaserine 3	Control1	Control2	Control3
Azaserine 1	1.00	0.82 ***	0.79 ***	0.91 ***	0.66 ***	0.73 ***
Azaserine 2		1.00	0.91 ***	0.84 ***	0.83 ***	0.92 ***
Azaserine 3			1.00	0.82 ***	0.81 ***	0.90 ***
Control1				1.00	0.70 ***	0.75 ***
Control2					1.00	0.87 ***
Control3						1.00
