Description of Additional Supplementary Files

Supplementary Data 1
Sample identifiers used in metagenomic analysis of field samples.

Supplementary Data 2
Full RNASeq results for transcriptome comparison of MIT9301 planktonic enrichment and biofilm enrichment populations. Each enrichment was selected for over 100 **generations. P-values reported are outputs from edgeR analysis package (see Methods).**

Supplementary Data 3
Raw *Prochlorococcus* cell count data measured by flow cytometry from HOT cruises 324-339. Data extracted using Hawai'i Ocean Time-series Data Organization and Graphical System.

Supplementary Data 4
Biofilm-related homologous genes identified in the transcriptome analysis (see Supp. Table 5). P-values reported are outputs from edgeR analysis package (see Methods).
