

cysS (Cysteine-tRNA ligase)

Pro1080 (NAD dependent epimerase/dehydratase)

eriC (chloride channel protein EriC)

ftsY (Signal recognition particle receptor FtsY)

rplW (50S ribosomal protein L18)

rplR (50S ribosomal protein L23)

Supplementary figure 3: Network illustrating relationship between proteins significantly changed after glucose addition. Proteomics was used to evaluate the effect of glucose addition on the proteome of *Prochlorococcus* SS120. Analysis performed using String (<http://string-db.org>) requiring low confidence (0.150) and adding two (white) nodes. Different colors represent different types of evidence for association: (green) Neighborhood, (red) Gene fusion, (navy blue) Cooccurrence, (black) Coexpression, (pink) Experiments, (light blue) Database.
